Collaborative Problem Solving

Challenging behavior occurs when we expect more from a child than the child can handle. The Collaborative Problem Solving model focuses on identifying the skills the child is lacking and the expectations he or she is having difficulty meeting. Its goal is to help children and caregivers solve those problems rather than trying to modify children's behavior through rewards and punishments.

You are invited to join us for a discussion about this, which is a non-punitive, non-adversarial, trauma-informed model of care originated by Ross Greene, PhD. You may attend one or both parts of this two-part series.

Who should attend?

Caregivers of school-age children.

***Workshops are free!
Refreshments provided
Registration required***

When:

Fridays

January 4 & 11, 2019

10:00 am to 12:00 pm
